Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Transcorring and disease

Transcorring and separations for tolerisation to antigens comprise Claim 1; Page 39; 58pp; English.

Ce Pharmaceutical preparations for tolerisation to antigens comprise CC either an isolated human non-collagen or non-myslin basic protein CC (MBP) polypeptide which is capable of tolerising an individual to an CC autoantigen; or an isolated human pathogen polypeptide capable of CC tolerising an individual to that polypeptide. In both cases, the CC polypeptide (whether self or non-self) includes an amino acid CC sequence corresponding to a sequence motif for a MHC class II CC protein, such as HLA-DR, which is associated with a human autorimune CC disease and which binds to the polypeptide to activate autoreactive CC -cells in individuals with the autoimmune disease. This peptide is CC derived from the human desmoglein 3 protein (amino acids 190-204) CC and is implicated as a self epitope in pemphigus vulgaris. Peptides of derived from the human desmoglein protein are described in w04841-47.

The polymeric matrix consists of one or more synthetic polymers having a solubility in water of less than 1 mg/l (e.g. poly-lactic-co-glycolic acid); and at least 90% of the microparticles have a diameter of less than 20 microns. The microparticles are useful for the delivery of nucleic acids to phagocytic cells. In one embodiment the microparticles are less than 20 microns in diameter and the nucleic acid (preferably in Closed circular form) includes an expression control sequence operatively linked to a coding sequence, where the expression product of the coding sequence is a polypeptide having a length and a sequence which permits it to bind to an MHC class I or I molecule. The response in mammals. The present sequence, an antigenic portion of desmoglein 3, is an example of an MHC class II peptide which can be expressed by the nucleic acid. It is associated with pemphigus

                                                                                                                                                                Fused protein recognised by pemphigus vulgaris auto:antibody - useful to treat and diagnose pemphis vulgaris Claim 1; Page 7-9; 9pp; Japanese.
W07908 represents the human pemphigus vulgaris (PV) antigen extracellular region. The PV antigen is produced in patients with pemphis vulgaris resulting in autoimmune disease. PV is a rare relapsing disease causing suprabasal, intra-epidermal bullae (vesicles) of the skin and mucuous membranes, which is fatal if untreated. The PV antigen was fused to a human IgG1 hinge region and the resulting fusion protein is useful to treat or diagnose

                                                                   foliaceus patient autoantibody which comprises the constant region of 19G linked to the extracellular region of pemphigus foliaceus antigen protein through the hinge portion. Pemphigus foliaceus is a chronic, generalised, vesicular and scaling skin eruption similar to dermatitis herpetiformis. The pemphigus foliaceus antigen fusion protein is useful to treat pemphigus foliaceus. The antigen is especially administered through an adsorbent upon which the fusion protein is immobilised via a carrier. The fusion protein is also useful for detecting pemphigus foliaceus antibodies which is useful in immonodiagnosis. The fusion protein has little or no side effect
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA encoding pemphigus vulgaris antigen diagnostic and therapeutic uses Disclosure; Fig 7; 50pp; English. This sequence is the pemphigus vulgaris and its encoding DNA may be used in the

An antibody (Ab) directed against epitopes of the present sequence can be used to diagnose, i.e. to detect carcinoma cells, especially micrometastases, not bound to desmosomes, to separate, enrich o detect living or fixed carcinoma cells by cell sorting methods as a therapeutic to deliver agents, e.g. other Ab or toxins, to target cells. The Ab provides rapid and reliable detection of metastatic carcinoma, and detects parts of DC that are not accessible in desmosome bound cells, as in normal tissue or
                Antibody reactive with part of desmosomal cadherin - exposed on surface of epithelial or carcinoma cells, not bound to desmosomes useful for diagnosis and treatment of carcinoma micrometastases claim 7; Page 5; 8pp; German.

The present sequence is a segment of the desmosomal cadherin (DC), desmoglein Dsg2, which is exposed on the surface of epithelial or carcinoma cells and not bound to desmosomes. An antibody (Ab)

The Ab provides rapid and reliable detection of metastatic carcinoma, and detects parts of DC that are not accessible in desmosome bound cells, as in normal tissue or carcinomas.
                     Human E-cadherin precursor.

The human E-cadherin protein precursor (R85487) is expressed by an cDNA clone (T05764) derived from human liver. The extracellular ancount of E-cadherin is used to generate peptides that specifically bind to heterotypic cognates of E-cadherin and which inhibit adhesion of intra-epithelial T-lymphocytes to E-cadherin-expressing epithelial or endothelial cells in vitro or in vivo, thereby modulating mucosal immune responses. Such peptides are also specifically reactive with a monoclonal antibody (E4.6 or E6.1) that binds to E-cadherin and that can inhibit T-cell binding.
                                                             Recombinantly-generated, attenuated, non-segmented, negative-sense, single stranded RNA virus of order Mononegavirales - having attenuating mutation in 3' genomic promoter region and RNA polymerase gene, useful as vaccine to immunise against such virus pisclosure; Page 246-254; 426pp; English.

This sequence represents the wild-type L protein from Human parainfluenza virus (HPIV-3) type 3 isolate JS. This sequence is used in a method which involves the isolation of recombinantly-generated, attenuated, the protein from the sequence of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inhibiting adhesion of T lisolating agents to treat psoriasis, etc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (BGHM ) BRIGHAM & WOMENS Brenner MB, Cepek KL; WPI; 95-392921/50.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Key
                 involves the isolation of recombinantly-generated, attenuated, non-segmented, negative-sense, single stranded RNA virus of the order mononegavirales which have at least 1 attenuating mutation in the 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HPIV-3 JS isolate wild-type L protein.
L protein; attenuation; non-segmented; negative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB; T05764

This sequence represents the Human parainfluenza virus (HPIV-3) type 3 vaccine FRhl cp45 I protein. This sequence is used in a method which involves the isolation of recombinantly-generated, attenuated, non-segmented, negative-sense, single stranded RNA virus of the order Mononegavirales which have at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI genomic promoter region and at least 1 attenuating mutation in the RNI polymerase gene. This RNA virus can be used as a vaccine to immunise a content of the promoter region and at least 1 attenuating mutation in the RNI polymerase gene. This action is the promoter region and at least 1 attenuating mutation in the RNI polymerase gene. This action is the promoter region and at least 1 attenuating mutation in the RNI polymerase gene. This action is the promoter region and at least 1 attenuating mutation in the RNI polymerase gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       W48712

PT polymerase gene, useful as vaccine to immunise against such virus PS Disclosure; Page 283-291; 426pp; English.

CC This sequence represents the Human parainfluenza virus (HPIV-3) type 3 CC vaccine Vero cp45 L protein. This sequence is used in a method which CC involves the isolation of recombinantly-generated, attenuated, CC non-segmented, negative-sense, single stranded RNA virus of the order CC Mononegavirales which have at least 1 attenuating mutation in the 3' CC genomic promoter region and at least 1 attenuating mutation in the RNA CC polymerase gene. This RNA virus can be used as a vaccine to immunise an CC individual against such a virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT

PT Bilirubin oxidase prepn. useful as an analytical enzyme - by culturing bilirubin oxidase in transformant culture

PS Claim 1; Page 29-32; 32pp; Japanesse.

CC The sequence encodes bilirubin oxidase. The protein produced has a cc 38 amino acid signal peptide which is removed to give the mature cc protein (R40843).

SQ Sequence 572 AA;

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Fri Jun 11 17:22:45 1999; MasPar time 2.44 Seconds 173.855 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Sequence: Title: >US-08-991-628-3 (1-15) from US08991628.pep 96 LNSKIAFKIVSQEPA 15

Scoring table: PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 26.281; Variance 28.608; scale 0.919

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NATL. ACAD. SCI. U.S.A. 88:4796-4800(1991).

FUNCTION: COMPONENT OF INTERCELLULAR DESMOSOME JUNCTIONS.

INVOLVED IN THE INTERACTION OF PLAQUE PROTEINS AND INTERMEDIATE
FILAMENTS MEDIATING CELL-CELL ADHESION.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

TISSUE SPECIFICITY: EPIDERMIS, TONGUE, TONSILAND OESOPHAGUS.

DOMAIN: CALCIUM MAY BE BOUND BY THE CADHERIN-LIKE REPEATS
